Full Stack Developer

Description

As a Full Stack Developer for Custom Design Partners, you will be tasked with the development of both front-end and back-end programming of client websites. You will be developing code for projects that involve databases and websites, and working with clients on their website's projects. We are seeking experienced and talented full-stack developers that are no stranger to building well-designed, performant, and effective front- and back-end web applications.

Responsibilities

- Developing front end website architecture
- Designing user interactions on web pages
- Developing back end website applications
- Creating servers and databases for functionality
- Designing and developing APIs

Qualifications

- Degree in Computer Science
- 5+ year full-stack development experience
- Programming languages and libraries like Ruby, PHP, Python, and .NET
- HTML, CSS, JavaScript
- Experience with databases
- Knowledge of security concerns and best practices
- Excellent verbal communication skills
- Good problem-solving skills
- Attention to detail
